EDUCATION

Massachusetts Institute of Technology

Cambridge, MA

M.S. in Computer Science; B.S. in Statistics | GPA: 3.93/4.00

Dec 2025

Coursework: Reinforcement Learning, Machine Learning, Computer Vision, Time Series

EXPERIENCE

Jump Trading, AI Research Scientist

Jan 2026 - Present

- Built the post-training data stack for an LLM-based forecasting system, improving forecast quality while achieving approximately 3x greater data efficiency.
- Developed a forecasting harness optimized for point-in-time information integrity and long-horizon evaluation, reducing future-information leakage from about 12% to below 1%.
- Developed algorithmic improvements to the forecasting post-training process, increasing the accuracy and calibration of probabilistic event forecasts.

Jump Trading, Quantitative Researcher Intern

Jun 2025 - Aug 2025

- Researched market structure and trading behavior across equities and options, developing predictive signals to inform trading decisions.
- Developed improved approaches to modeling portfolio risk across related securities, substantially increasing the accuracy of risk forecasts.

Optiver, Quantitative Trader Intern

Jun 2024 - Aug 2024

- Analyzed SPX trading activity at the sequence level, uncovering repeatable inefficiencies and contextual factors associated with trading performance.

Applied Materials, Machine Learning Engineer Intern

May 2023 - Aug 2023

- Developed machine-learning surrogates for computationally expensive wafer-metrology workflows, reducing prediction time by up to 20x and improving performance on unseen wafer structures by 27%.

RESEARCH

Cross-Model Synthetic Feedback for Reasoning Models

Working Paper

- Developed a label-free post-training framework that improves language and vision reasoning without ground-truth reward labels or external evaluator models.
- Improved training robustness in self-supervised reasoning and achieved 2-8% gains on language benchmarks and 3-8% on multimodal benchmarks; exceeded a prior multi-agent RL baseline by about 4% using 50% fewer agents.

SKILLS

Programming: Python, C/C++, R

Machine Learning: PyTorch, Transformers, Reinforcement Learning, LLM Post-Training

Data: NumPy, Polars
